

LSW REBAR

Overview

At Liberty Steel & Wire (LSW), we melt, refine, cast, roll and finish our steel to our own exacting standards. Our capabilities enable LSW to produce the finest American-made steel possible, and then process it to match the most stringent customer specifications. In fact, our internal standards routinely exceed AISI and ASTM standards.

LSW Rebar is manufactured with the same quality assurance as all other steel products we make. LSW's ability to monitor the process from beginning to end provides a high degree of predictability and consistent quality. Every step of the manufacturing process happens at our plant in Peoria, Illinois. As a result, our rebar products are highly sought after for projects that require 'Made in America Compliant' materials.

Customer Care

Located in the heart of the U.S., shipping to our customers saves time and money. That's because LSW is strategically positioned to ship by truck, rail or barge. This advantage means we can reach our customers by the most time and cost efficient mode of transportation, regardless of destination.
